SUMMARY

Backend Engineer specializing in designing and developing scalable backend systems and RESTful APIs using **ASP.NET Core** and **Spring Boot**. Experienced in microservices architecture, authentication and authorization systems (JWT, RBAC), and database optimization. Passionate about system design, distributed systems, and building production-grade software with clean, maintainable, and well-structured architecture.

EXPERIENCE

TAQA Arabia

Software Engineer Intern

Aug 2025 – Sep 2025

Cairo, Egypt

- Developed 10+ RESTful APIs using **ASP.NET Core (C#)**, handling backend business logic for enterprise systems
- Optimized critical SQL queries, reducing average database response time by approximately 30%
- Collaborated in a team of 5 engineers using Git version control and agile workflow
- Resolved 15+ backend bugs and contributed to system testing and feature enhancement tasks

PROJECTS

Pharmacy Microservices System

2026

- Engineered a microservices-based pharmacy system with role-based access control (Admin / Pharmacist) across 4 independent services
- Implemented secure JWT authentication and authorization flows, reducing unauthorized access risks
- Designed an approval workflow for inventory and product updates requiring admin validation
- Enforced backend validation rules ensuring data integrity (no negative stock or pricing)
- Architected the system using clean architecture principles with clear separation of concerns
- Designed extensibility hooks for future AI/OCR integration (prescription image processing pipeline)

ML Premier League Match Prediction System

2026

- Built an end-to-end machine learning pipeline for football match outcome prediction across 380+ fixtures
- Performed data preprocessing, feature engineering, and model evaluation using cross-validation
- Achieved improved prediction accuracy through iterative feature selection and hyperparameter tuning

Wafriy – Travel Cost Estimator

2026

- Developed a backend system to estimate dynamic travel costs across multiple trip configurations
- Designed 8+ RESTful API endpoints for trip setup, pricing logic, and cost breakdowns
- Implemented a reusable pricing engine supporting extensible fare rules and future service integrations

FlutterApp IN Gas

2025

- Developed a cross-platform mobile application using Flutter targeting Android and iOS
- Integrated REST APIs for real-time backend communication, reducing data fetch latency
- Improved application performance by refactoring state management with efficient widget rebuilds

IngazAPI (Backend System)

2025

- Built a REST API backend using **ASP.NET Core** serving as the core service layer for the Ingaz platform
- Applied clean architecture principles across 3 layers (Domain, Application, Infrastructure)
- Reduced code coupling and improved testability through dependency injection and interface abstractions

EDUCATION

Dual Award B.Sc. Computer Science (Software Engineering)

Expected 2027

University of Greenwich (UK) & MSA University (Egypt)

Cairo, Egypt

Dual award degree program validated by the **University of Greenwich (UK)** and delivered at **MSA University**

Curriculum aligned with British higher education standards in Computer Science and Software Engineering

Degree awarded jointly by both institutions upon successful completion of all program requirements

SKILLS

Backend Development: ASP.NET Core, Spring Boot, Node.js

Programming Languages: C#, Java, JavaScript, TypeScript

Databases: SQL (Indexing, Query Optimization), MongoDB, Redis

ORM & Data Access: Entity Framework Core, Dapper

Architecture: Microservices, Clean Architecture, REST API Design, Domain-Driven Design

Security: JWT Authentication, Role-Based Access Control (RBAC)

API & Docs: Postman, Swagger / OpenAPI

DevOps & Tools: Git, GitHub, Docker, CI/CD (GitHub Actions)
