SUMMARY

Backend Engineer specializing in designing scalable backend systems and RESTful APIs using **ASP.NET Core** and **Spring Boot**. Experienced in microservices architecture, authentication systems (JWT, RBAC), database design, and performance optimization. Passionate about system design, distributed systems, and building maintainable, production-oriented backend solutions using clean architecture principles.

EXPERIENCE

TAQA Arabia

Software Engineer Intern

Aug 2025 – Sep 2025

Cairo, Egypt

- Developed and maintained 10+ RESTful APIs using **ASP.NET Core (C#)** for enterprise backend systems
- Improved database performance by optimizing SQL queries, reducing response time by **40%**
- Participated in Agile development workflow with a team of 5 engineers using Git version control
- Assisted in debugging, testing, and resolving 15+ backend issues in production-like environments

PROJECTS

Enterprise Pharmacy Microservices System (Flagship Project)

2026

- Designed a distributed microservices-based backend system with 4 independent services (Auth, Product, Inventory, Orders)
- Implemented secure JWT authentication and role-based access control (Admin / Pharmacist)
- Built an approval workflow system for inventory and product modifications to ensure data integrity
- Applied Clean Architecture and Domain-Driven Design principles for scalability and maintainability
- Enforced strict business rules (no negative stock, pricing validation, audit-safe operations)
- Designed system extensibility for future AI/OCR-based prescription processing

ML Premier League Match Prediction System

2026

- Built an end-to-end machine learning pipeline for predicting football match outcomes across 380+ fixtures
- Performed feature engineering, data preprocessing, and model evaluation using cross-validation
- Improved prediction accuracy through iterative tuning and feature selection techniques

Wafrrly – Travel Cost Estimation System

2026

- Developed a backend system for dynamic travel cost estimation across multiple trip configurations
- Designed and implemented 8+ REST APIs for pricing logic, trip setup, and cost breakdown
- Built a modular pricing engine supporting extensible business rules and future integrations

FlutterApp IN Gas

2025

- Developed a cross-platform mobile application using Flutter for Android and iOS
- Integrated REST APIs for backend communication and optimized data fetching performance
- Improved UI responsiveness by optimizing state management and widget rebuild logic

IngazAPI (Backend System)

2025

- Built a scalable RESTful backend using **ASP.NET Core** following Clean Architecture principles
- Structured system into Domain, Application, and Infrastructure layers for maintainability
- Improved testability and modularity through Dependency Injection and interface-based design

EDUCATION

Dual Award B.Sc. Computer Science (Software Engineering)
University of Greenwich (UK) & MSA University (Egypt)

Expected 2027
Cairo, Egypt

UK-validated dual degree program delivered at MSA University

Curriculum aligned with British Computer Science and Software Engineering standards

Degree awarded jointly upon completion of academic requirements

SKILLS

Backend Development: ASP.NET Core, Node.js, Spring Boot

Programming Languages: C#, Java, JavaScript, TypeScript

Architecture: Microservices, Clean Architecture, Domain-Driven Design, REST API Design

Databases: SQL Server, PostgreSQL, MongoDB, Redis

Security: JWT Authentication, Role-Based Access Control (RBAC)

DevOps: Docker, Git, GitHub Actions (CI/CD)

API Tools: Swagger / OpenAPI, Postman
