SUMMARY

Backend-focused Software Engineering student building RESTful APIs and microservices with **ASP.NET Core** and **Spring Boot**. Experienced in Clean Architecture, JWT/RBAC authentication, SQL and NoSQL database design, and distributed system design. Delivered 10+ production APIs during a backend internship, improving query performance by 40%.

EXPERIENCE

TAQA Arabia

Software Engineer Intern

Aug 2025 – Sep 2025

Cairo, Egypt

- Built and shipped 10+ RESTful APIs using **ASP.NET Core (C#)** for enterprise backend systems.
- Tuned SQL Server queries and indexing strategy, cutting API response times by **40%**.
- Delivered sprint features within a five-engineer Agile team using Git-based branching workflows.
- Diagnosed and resolved backend defects, improving reliability across staging and production.
- Documented REST APIs with Swagger/OpenAPI to speed up frontend and QA integration.

PROJECTS

Enterprise Pharmacy Management System

GitHub

2026

- Architected a microservices backend with four independently deployable services (Authentication, Product, Inventory, Orders) using ASP.NET Core.
- Implemented JWT authentication and Role-Based Access Control for Admin and Pharmacist roles.
- Built inventory and product management workflows with multi-step validation logic.
- Applied Clean Architecture and Domain-Driven Design to separate business logic from infrastructure.
- Designed REST APIs with Entity Framework Core, enforcing inventory consistency and pricing validation rules.

IngazAPI

GitHub

2025

- Built a RESTful backend with ASP.NET Core structured into Domain, Application, Infrastructure, and Presentation layers using Clean Architecture.
- Implemented Dependency Injection, Repository Pattern, and Service Layer architecture to isolate business logic.
- Documented APIs with Swagger and mapped data access through Entity Framework Core.
- Applied SOLID principles, improving modularity and long-term testability.

Pro-Shop E-Commerce Platform

GitHub

2026

- Built RESTful APIs with Node.js, Express.js, and MongoDB for a multi-role e-commerce platform.
- Implemented JWT authentication, password recovery, and role-based access for Customers, Admins, and Delivery staff.
- Developed product, order, and inventory modules covering the full e-commerce workflow.
- Integrated Cloudinary for media storage and optimized MongoDB queries to reduce API latency.

- Added search, pagination, filtering, and review management to the product catalog.

Wafriy – Travel Cost Estimation System

GitHub

2026

- Built a backend for dynamic travel cost estimation across multiple trip configurations.
- Designed 8+ REST APIs for pricing logic, trip setup, and cost breakdown.
- Built a modular pricing engine supporting extensible business rules.

Other Projects

- ML Premier League Match Prediction System
- FlutterApp IN Gas

EDUCATION

Dual Award B.Sc. Computer Science (Software Engineering)

University of Greenwich (UK) & MSA University (Egypt)

Expected 2027

Cairo, Egypt

RELEVANT COURSEWORK

Data Structures & Algorithms

Database Systems

Software Engineering

Distributed Systems

Operating Systems

SKILLS

Languages: C#, Java, JavaScript, TypeScript

Backend: ASP.NET Core, Spring Boot, Node.js, Express.js

Frontend: React.js

Databases: SQL Server, PostgreSQL, MongoDB, Redis (Caching)

Architecture: Microservices, Clean Architecture, REST API Design, SOLID Principles

Security: JWT Authentication, ASP.NET Identity, Role-Based Access Control (RBAC)

Tools: Git, GitHub, Docker, Swagger/OpenAPI, Postman

CI/CD: GitHub Actions

ORM: Entity Framework Core

LANGUAGES

Arabic: Native

English: B2
